

Mariem Dardouri is an assistant Professor at the University of Lorraine, France, within the IUT Thionville-Yutz and the LMOPS laboratory (UR 4423). She received her Ph.D. in Electrical Engineering, with research focused on grid-connected power converters, advanced control strategies, and fault-tolerant control.

Her research interests include power electronics, DC/DC converters, renewable energy systems, photovoltaic systems, DC microgrids, advanced control, and fault diagnosis and fault-tolerant control. Her current research focuses particularly on high-efficiency GaN-based power converters and resilient control strategies for renewable-energy-based microgrids.
