

Julian Dörr, M.Sc. Fraunhofer Institute for Industrial Engineering IAO, Stuttgart, Germany

Julian Dörr is a research associate at Fraunhofer IAO in Stuttgart, Germany, and a doctoral candidate at the University of Stuttgart. He holds a B.A. in International Energy and Resource Management and an M.Sc. in International Environmental Sciences. Over the course of his studies and career, he has studied and worked in several countries, including Argentina, Belgium, Brazil, Spain and the United States, in international organizations, public institutions and research.

His research focuses on green hydrogen and model-based decision support under deep uncertainty. He works on the market ramp-up of hydrogen technologies and on robust strategies for companies and policy makers in emerging energy markets. Before joining Fraunhofer IAO, he advised governments in Latin America and the Caribbean on sustainable energy and infrastructure planning as a consultant at the Inter-American Development Bank in Washington, D.C.

He has published on hydrogen systems, robust decision making, and sustainable infrastructure, and is a recipient of the DAAD Green Hydrogen scholarship.

Paper ID 170 – *Investing in Decentralized Hydrogen Under Deep Uncertainty: A Case Study*
